

JOHN WYETH & BROTHER'S
COMPRESSED TABLETS
O F
BI-CARBONATE OF SODA
A N D
BI-CARBONATE OF POTASH.

Useful in all cases where an antacid is indicated.

The value of alkalies, and especially of the bi-carbonates of Potash and Soda, is very fully understood by medical men, and to a great extent also by the public. In a very large class of cases Indigestion, Flatulency, Heartburn and Colic, are due to an excess of acid in the stomach; and this condition usually constitutes an important element in Gout, Rheumatism and Gravel.

Bi-Carbonate of Soda is but slightly soluble, (requiring 35 parts of water at the temperature of the body.) In the form of our Compressed Tablets it dissolves even more slowly, and therefore produces a mild and gradual antacid effect, without disagreeable taste. Another advantage of it is that it maintains the phosphates in solution, (by reason of its superabundance of carbonic acid,) and prevents the formation of deposits of this character.

For administration, the tablet form possesses many easily appreciated advantages over that of solution. A smaller quantity of the article is required, and its purity is assured. The exact dose called for can be given. The remedy can be carried about the person, and taken at any time without trouble or annoyance.

DOSE.—As an antacid, one every two or three hours till relieved. For Gout, Rheumatism or Gravel, one or two thrice daily.

JOHN WYETH & BROTHER'S
COMPRESSED TABLETS OF
BI-CARBONATE OF POTASH.

Antacid—Diuretic—Antilithic.

Five Grains in each.

These Tablets will be found very useful in cases of acidity of the Stomach, and in the Dyspepsia due to this condition. They are suited also to cases of Gout and Rheumatism, as well as to the irritation of the Kidneys so often connected with those disorders.

Physicians prescribing these Tablets can depend upon the purity of the salt and the accuracy of the dose.

For the antacid effect, one may be taken as required. In Gout, Rheumatism or Gravel, one or two three or four times daily.
